Dear KRA Support,

Please find attached a screenshot from the current Corporation Income Tax (CIT) iTax return template for your reference.

We kindly request clarification on the treatment of tax losses brought forward in the current iTax return.

From the attached screenshot, we note that:

Section K reflects the losses brought forward from previous years.

In Section M – Tax Computation, there is a line labelled "Loss B/F from previous year set off against current year's income (Line No. 6 from Previous Year

This field is greyed out and cannot be edited by the taxpayer.

The field displays 0, even though Section K contains losses brought forward.

Kindly clarify the following:

Should the losses reflected in Section K automatically be utilised to offset the current year's taxable income?  
If automatic utilisation is expected, why does the "Loss B/F from previous year set off against current year's income" field remain zero?  
Is there another section of the current iTax return where the taxpayer is required to claim or apply these losses?  
Is this the expected behaviour of the current iTax return template, or could it indicate an issue with the template or return preparation?

We are seeking this clarification before submitting the return to ensure it is completed correctly in accordance with the current Income Tax Act and iTax requirements.

The attached screenshot is provided solely to illustrate the relevant sections of the return.

We appreciate your guidance.

Yours faithfully,

For Global Star Investments Limited

Director
