Dear Silvia Minage and the eTIMS Support Team,

Thank you for your guidance and the detailed integration steps.

Following your instructions for system-to-system integration, we would like to proceed with the **OSCU (Online Sales Control Unit)** option for our automated tenant billing and invoicing portal.

Kindly generate and map the integration token for our sandbox account using the following details:

- **Company Name:** Global Star Investments Limited
- **Company KRA PIN:** P051548911H
- **Trader Invoicing System (TIS) Name:** Global Star Portal
- **TIS Version Number:** v1.0

- **Test Device Serial Number:** GSIL-OSCU-001
- **Intended Integration Type:** OSCU (Online Sales Control Unit)

Please let us know once the sandbox token and device mapping have been provisioned on your end so we can proceed with testing via the sandbox API endpoint.

Thank you for your continued support and assistance.

Sincerely,

Peter Odhiambo

Director / Management

Global Star Investments Limited

Subject: Re: Fw: Subject: Request for OSCU Integration Token and Device Mapping for Sandbox (PIN: P051548911H)

Good morning,

We appreciate your continued interest and commitment to the eTIMS integration process.

As part of the eTIMS implementation, KRA has provided for system-to-system integration between it and the taxpayer's invoicing systems via API. This can be achieved in two ways; An Online Sales Control Unit (OSCU) for entities whose invoicing is always online or a Virtual Sales Control Unit (VSCU) for entities undertaking bulk invoicing and whose invoicing is not always online. The process will entail the development, testing, vetting, and certification of either the interested taxpayer who has the capacity to self-integrate or for 3rd party software developers (integrators) to facilitate the taxpayer integration process.

Kindly follow the steps below to initiate integration with the eTIMS platform:

Step 1: Sandbox Registration

Register on the eTIMS Sandbox (test) environment via the eTIMS Taxpayer Portal :

<https://etims-sbx.kra.go.ke>

Step 2: Token Generation and Service Request

Kindly share the following details to enable generation of the token for either OSCU/VSCU integration:

- The Company KRA PIN
- Your Trader Invoicing System (TIS) name
- The TIS version number
- Serial number you will be using for testing
- Specify whether you intend to test for OSCU /VSCU

Step 3: Testing

The process is as follows;

1. Conduct full testing in the sandbox environment
2. Schedule and complete the automated test once sandbox testing is complete
3. Upon achieving a Pass result, a UAT certificate is issued and a Technical Demo is scheduled

We would like to inform you that integrators currently testing the OSCU solution are encouraged to utilize the GavaConnect platform via <https://developer.go.ke> which provides granular and well-structured test cases to support comprehensive testing and validation process.

The platform is designed to enhance your testing experience by offering clear scenarios aligned to OSCU requirements, thereby ensuring accuracy and consistency during integration.

Should you require any clarification, technical assistance, or general support while using the platform, please do not hesitate to reach out to the API Support team via apisupport@kra.go.ke and teamautomation@kra.go.ke for any assistance.

Step 4: Authorization

After successfully passing the Technical Demo, the integrator proceeds to the final stage of authorization

If approved, the integrator is certified and published on the KRA website (third-party integrators) to go live

Find below the relevant links and documentation to support your testing and integration process as well as

checklist and OSCU postman collection.

Subject: Subject: Request for OSCU Integration Token and Device Mapping for Sandbox (PIN: P051548911H)
Date: Thu, Aug 6, 2026 10:51 AM

Dear KRA eTIMS Support Team,

I am writing to request assistance regarding our system-to-system integration setup on the eTIMS Sandbox portal for **Global Star Investments Limited (PIN: P051548911H)**.

We are currently configuring our automated tenant billing and invoicing portal to connect via the OSCU (Online Sales Control Unit) API interface. However, during the service request registration and device management process on the sandbox portal, we encountered an invalid integration token requirement when attempting to finalize our virtual control unit mapping.

Could you please assist us in generating or providing the official Integration Token and Device Serial Number mapping for our sandbox account so we can successfully complete our software-to-system handshake?

Thank you for your guidance and support.

Sincerely,

Peter Odhiambo
